Which hotel to stay in New York?

Izidine Jaime

April 17, 2020

Data Sources

In order to achieve the goal of this project we will be using the following data sources:

I. **Geodata of hotels and pharmacies in New York using Foursquare**
We will get all the hotels and pharmacies located on the county with fewer positive cases of COVID-19 in NY State, using Foursquare.

II. **Dataset of New York State Statewide COVID-19 Testing**
This dataset includes information on the number of tests of individuals for COVID-19 infection performed in New York State beginning March 1, 2020, when the first case of COVID-19 was identified in the state. The primary goal of publishing this dataset is to provide users timely information about local disease spread and reporting of positive cases.
The Dataset can be found on: https://health.data.ny.gov/Health/New-York-State-Statewide-COVID-19-Testing/xdss-u53e

These datasets will be absolutely useful and will provide us with the current situation in the State of NY
